DETAILED ACTION

Amendment Entry & Claim Status

The amendment filed on March 31, 2006 has been acknowledged and entered.

Claims 1-21 are pending.

Withdrawn Rejection(s)

The non-statutory double patenting rejection in the previous office action is withdrawn herein.

Rejection under 103 is withdrawn herein.

Claim Objections

Claim 21 is objected to because of the following informalities: Claim 21 is missing the word –in- in line 3, after “therewith,”. Appropriate correction is required.

New Grounds of Rejection(s)

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 1641

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1, 2, 12, 18-21 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 25 of copending Application No. 10/133,610 (earlier filed application, has just been allowed). Although the conflicting claims are not identical, they are not patentably distinct from each other because the earlier filed application '610 discloses a method of using the device comprising a plurality of particles, each bound with a receptor, which are mixed within the liquid crystalline material. The composition of plurality of particles bound with receptors positioned within the liquid crystalline material in application '610 satisfies the requirement of the composition of the present invention- which recites a plurality of particles attached to receptors, positioned and movable within an amount of liquid crystalline material. Although co-pending application does not teach the particles are movable within the liquid crystalline material, it is obvious that the particles are movable within the liquid crystalline material because the particles of the present invention are the same as those in the application '610.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

Claims 3-11, 13-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
